IdPhotos 2008 Free Download is a professional photo processing software designed to help you effortlessly process digital photos for passports, ID cards and Visas. Even inexperienced users can start working with this program immediately, as it features a user-friendly interface and does not require any previous knowledge. The interface of IdPhotos 2008 is professional-looking and easy to work with; you can get started by selecting the type of the ID photo (a photograph or a drawing), and by importing the image via the file browser (drag and drop is not supported). Working with multiple items at the same time is not possible. So, you can rotate the image and edit its filename. IdPhotos 2008 requires you to assign the facial features to the image, in order to deliver accurate results. These focus on the eye pupils, chin and crown. Plus, you can crop the photograph, select a layout from several presets (which can be edited) and make coloring adjustments (hue channels, density, gamma, contrast, saturation). Settings can be saved as default or restored to their initial values. Once the procedure is done, you can save the final photo to file (JPEG, BMP, PNG, TIFF) or into the photo repository. From the 'Options' screen you can specify the automatic rotation direction and maximum number of pictures in the repository, along with the default folders for the repository and page layouts.
