SpatChorus5 provides one input and five outputs to a stereo audio signal. The chorus effect is achieved by using the Symmetry modulator with independent settings for modulation depth and symmetry. The phasing effect is provided by the Phasor modulator. Both modulators can be used together for combining the phasing and chorus effects. The Chorus intensity and Delay time can be set independently for each output. Four additional XY modulators are included which enable you to control the amplitude and rate of the outputs, which is very useful for creating guitar sounds.
